COLLECTIVE ACTION: SUSTAIN AND ACCELERATE HIV PROGRESS

Since 2003, the U.S. President's Emergency Plan for AIDS Relief (PEPFAR) has been steadfast in supporting lifesaving treatment for people living with HIV, saving 26 million lives and enabling 7.8 million babies to be born HIV-free.¹ PEPFAR is working with partners across 55 countries to sustain the gains made and accelerate progress to end HIV/AIDS as a public health threat by 2030. The program is also working to ensure the HIV response in 2030 and beyond is led and delivered by governments or local entities with community engagement and government accountability.

Across 55 countries:

PEPFAR is providing lifesaving HIV treatment for 20.6 million people, including 566,000 children, as of Sept. 30, 2024. Viral load testing coverage and suppression among people on treatment continues to increase for children and remains high among adults – 95% of adults and 89% of children are currently virally suppressed.

PEPFAR is changing the trajectory of the HIV pandemic. Available UNAIDS estimates show there were 52% fewer new HIV infections in 2023 than in 2010 across PEPFAR-supported countries, compared with a 39% reduction globally. During the same time frame, AIDS-related deaths decreased by 59% in PEPFAR-supported countries, compared with 51% globally. PEPFAR accounts for more than 90% of pre-exposure prophylaxis (PrEP) initiations for HIV prevention globally. In FY 2024, the program provided HIV testing services to 83.8 million people, 12 million more than in FY 2023. PEPFAR has also provided 35.1 million voluntary medical male circumcisions for HIV prevention since 2007, including 2.7 million in FY 2024.

PEPFAR reached 2.3 million adolescent girls and young women with comprehensive HIV prevention services in FY 2024. This year marks the 10th anniversary of PEPFAR's flagship DREAMS (Determined, Resilient, Empowered, AIDS-free, Mentored and Safe) program, which has reduced new HIV infections through interventions including access to PrEP, support for secondary school, and violence prevention. PrEP initiations among adolescent girls and young women ages 15-24 is 1.4 times higher in districts implementing DREAMS, with nearly 475,000 initiated in FY 2024.

PEPFAR RESULTS FY 2024

20.6 million people on life-saving antiretroviral treatment

2.5 million people newly enrolled on PrEP to prevent HIV infection

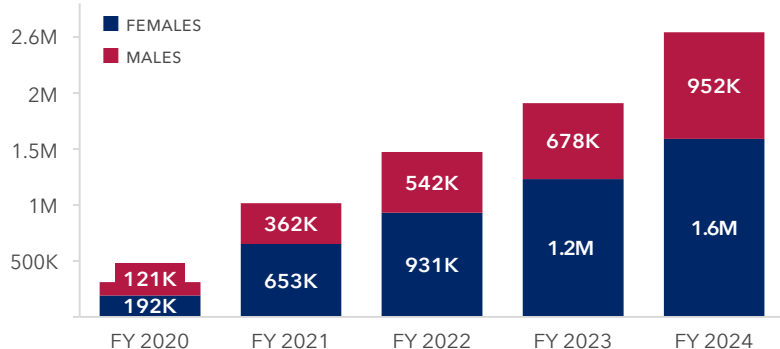

2.3 million adolescent girls and young women reached with comprehensive HIV prevention services

83.8 million people provided with HIV testing services

6.6 million orphans, vulnerable children and their caregivers received critical care and support

342,000 health workers directly supported by PEPFAR

DRIVING HIV PREVENTION INNOVATION TO THE COMMUNITY

PEPFAR-SUPPORTED PREP INITIATIONS FY 2020-2024

PEPFAR is delivering on the growing demand across partner countries for highly effective pre-exposure prophylaxis (PrEP) for HIV prevention for populations at high risk of infection.

In the last four years, new annual PrEP initiations supported by PEPFAR have increased by more than 500%, reaching 2.5 million people protected from HIV infection in FY 2024.

PEPFAR accounts for more than 90% of PrEP initiations globally. PEPFAR is providing long-acting, injectable PrEP in five countries and plans to launch in six additional countries by the end of 2024. As part of effective HIV combination prevention interventions, innovations in long-acting, injectable PrEP hold potential to accelerate progress toward ending HIV/AIDS as a public health threat.
